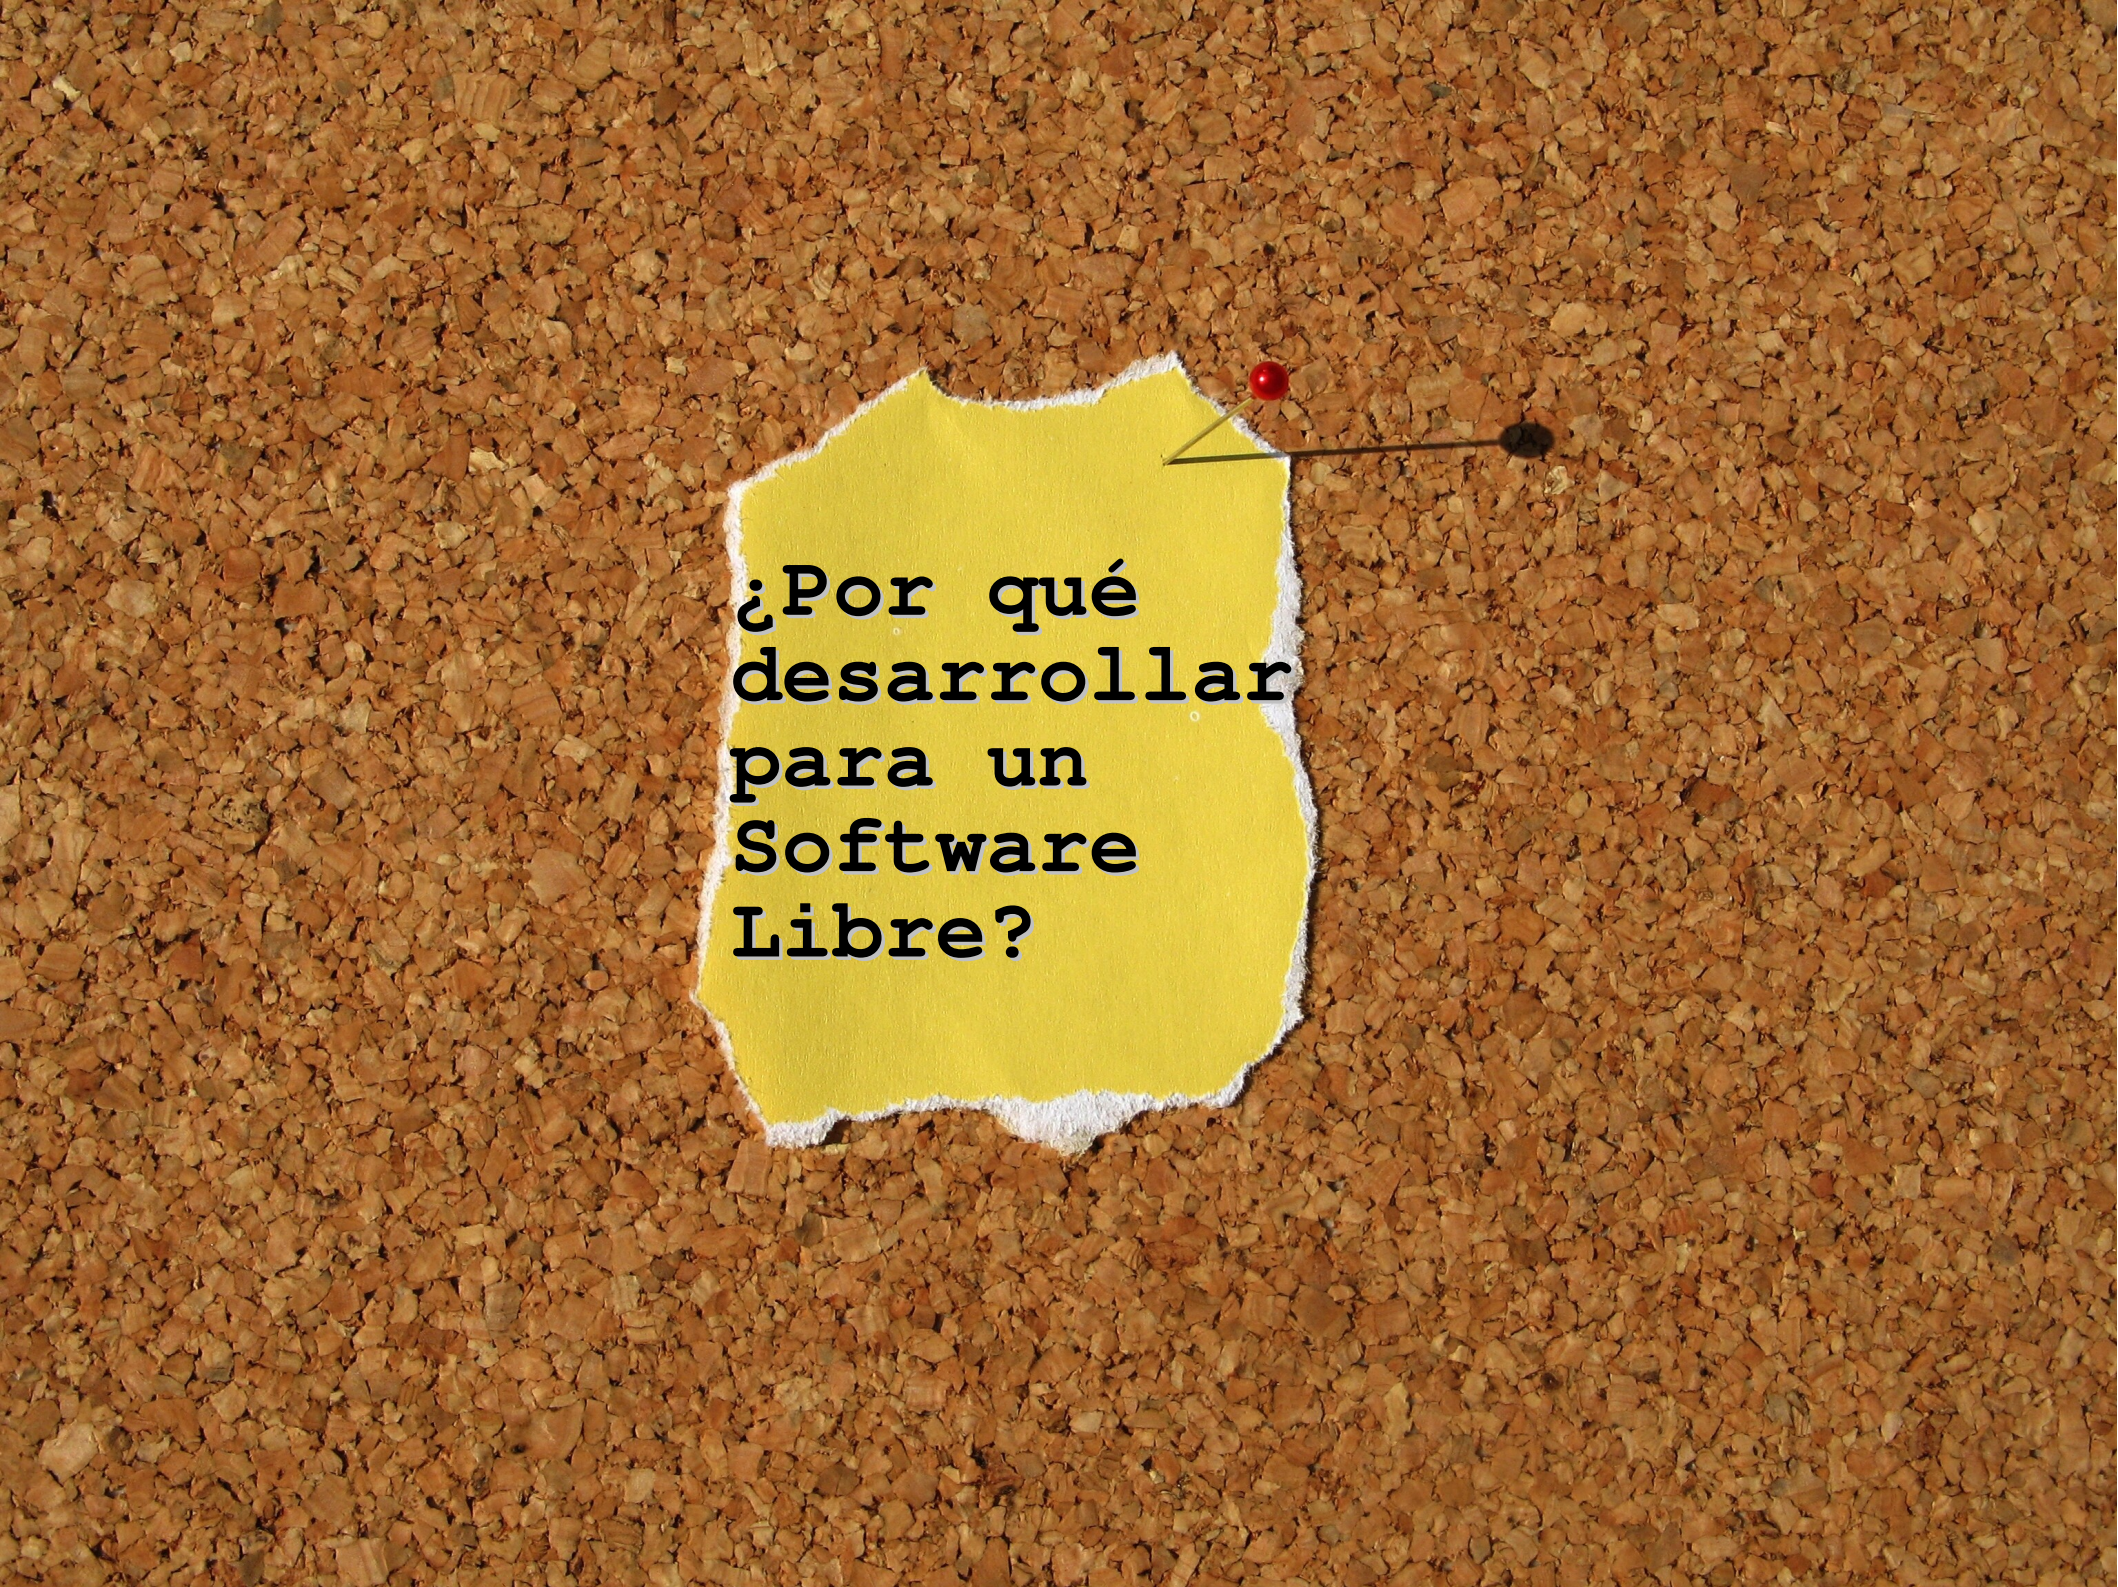
Desarrollo de Software Libre



¿Por qué desarrollar para un Software Libre?

Para aprender

Para vivir de lo que nos gusta hacer

Para sentir, en algo concreto, que una pequeña contribución hace una diferencia.

Para ser famosos

Para no quedarnos sin trabajo

Project Summary

Moodle is a learning management system for producing Internet-based course Web sites. It is written in PHP and is easy to install and use on Linux, Windows, Mac OS X, SunOS, BSD, and Netware 6. It has been designed to support modern pedagogies based on social constructionist theory, and includes activity modules such as forums, chats, resources, journals, quizzes, surveys, choices, workshops, glossaries, lessons, and assignments. It has been translated into over 70 languages, with more on the way, and supports the popular SCORM standard for content packaging. Moodle offers a free alternative to commercial software such as WebCT or Blackboard, and is being used by a growing number of universities, schools, and independent teachers for distance education or to supplement face-to-face teachin

Description

On "general" type forums, setting "open" to 0 doesn't prevent the "Reply" option to appear.

This problem was detected when a forum had some postings and the teacher decided that the work should go on in some other place. So she set "open" to "0" but the Reply option still appeared. Of course, when students clicked on that link, a red box (in ENGLISH) appeared: "Sorry, but you can not post in this forum", so they could not really reply, even though Moodle said so.

FIX:
===
Simply check the "open" state before showing the "Reply" link.

In discuss.php:
Line 147: if(!$forum->open) { Line 148: $canreply = false; Line 149: } elseif ((empty($mygroupid) and $discussion->groupid == -1) || ($mygroupid == $discussion->groupid)) {

I've just had a quick glance at MOODLE_16_STABLE and MOODLE_17_STABLE and didn't find any reference to the "open" state, so this could still be in both branches.

Vy-Shane Sin Fat added a comment - 01/Dec/06 2:05 PM
Note: As from Moodle 1.7, the forum->open state is no longer used. Instead, the new roles system is used to decide who can view posts, start discussions and reply to posts in forums.

Martin Dougiamas added a comment - 21/Feb/07 9:22 AM
Assigning to me temporarily because Vy-Shane no longer works for Moodle HQ.

Yu Zhang added a comment - 15/Mar/07 3:16 PM
Hi,

There are only 2 references from forum/lib.php - forum_convert_to_roles() and forum/restorelib.php - forum_restore_mods(). In both cases this is needed because we could have a 1.6 or lower version. Other than these 2 I could not find any other references. Can I close this bug?

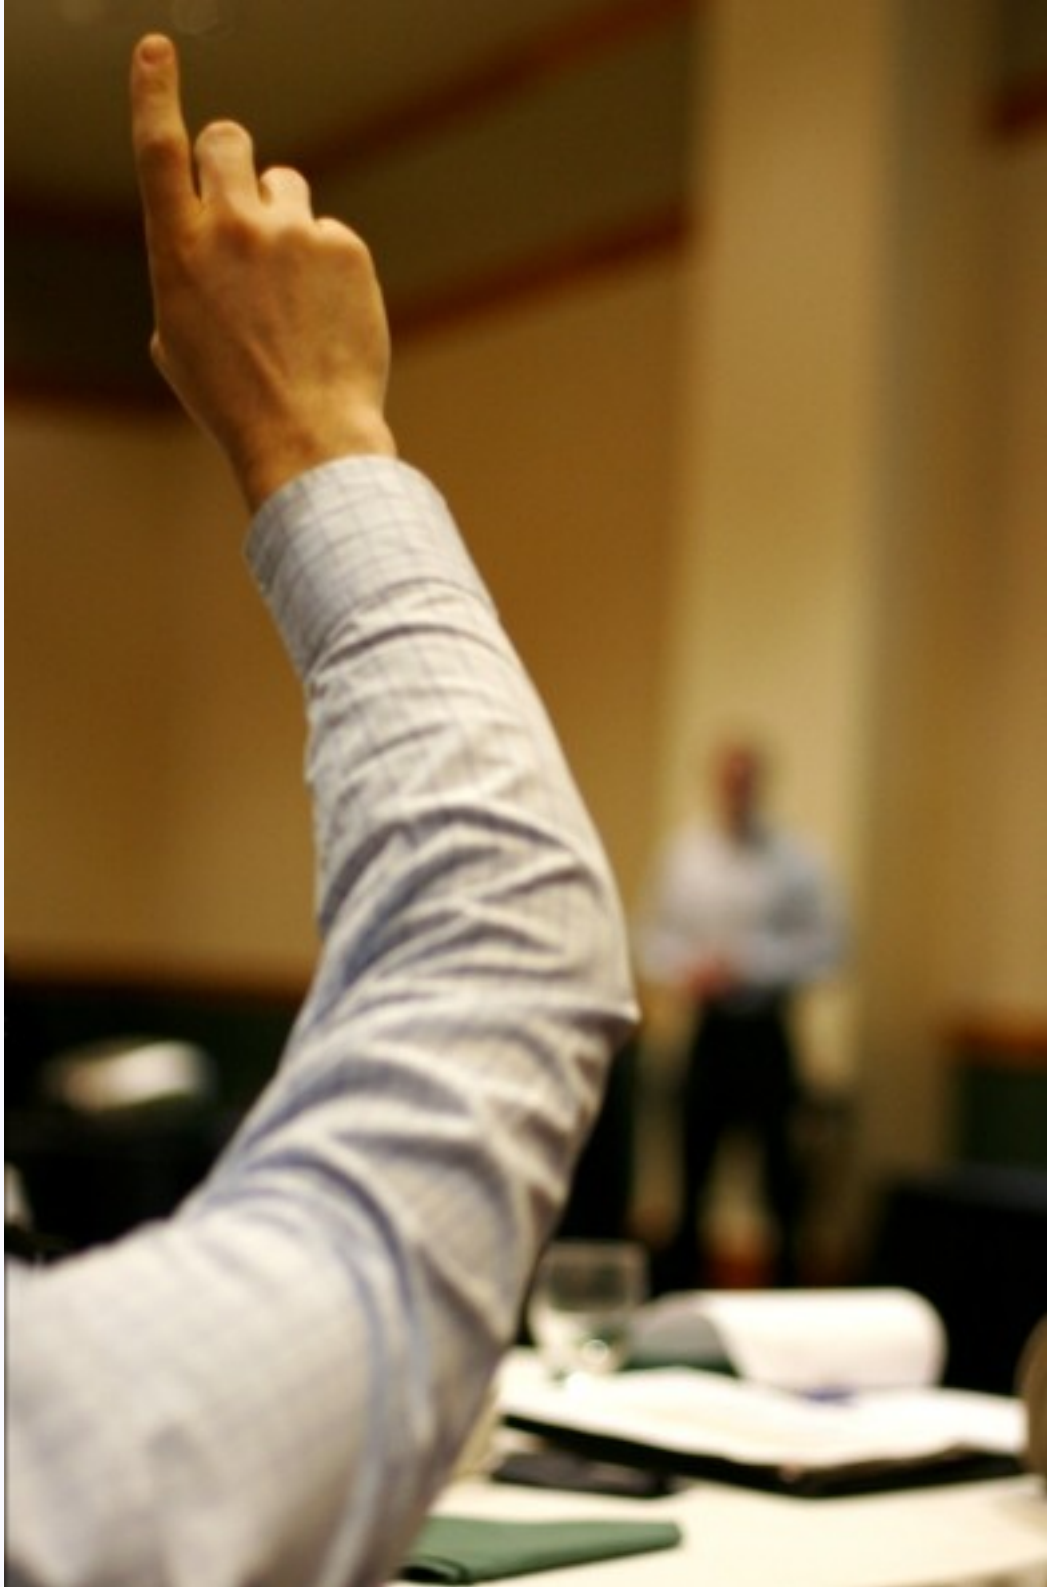
I think ~~MDL-8864~~ solved this for the 1.7 branch.


Yu Zhang added a comment - 20/Mar/07 1:02 PM
Closing this as this is fixed in 1.7
